

Figs. 3 and 4. Similar meter readings result when only the front channels are fed in both the Sansui QS (above) encoding system and the CBS SQ system (right). However, meter readings in SQ and QS systems are different when all channels are fed with in-phase test signal.

Fig. 5. Matrix encoders enable a partially recoverable four-channel signal to be impressed onto two channels for distribution and broadcast. Decoders are needed at listening end to re-create quadrasonic effect.
