

BEFORE YOU BUY

Synthesizer Makes the Others Sound Old-Fashioned.

adjacent channels. The figure for opposite channels is an even higher 30dB. The original 4-channel sound field reaches your ears truthfully and clearly.

It's something to think about very carefully before you invest your money in any receiver with only an "RM" type decoder. The many advantages of the QS vario-matrix decoder are why *Stereo Review* critic Julian Hirsch calls the QRX-7001 "unquestionably the finest QS receiver we have ever seen."

Have You Heard QS 4-Channel on FM Lately?

Today there are several dozen FM stations broadcasting 4-channel music with the QS System, and the number is increasing every day.

They are heard in mono and stereo too, of course. But with your QRX-7001 and its QS vario-matrix decoder, you can enjoy them in 4-channel—real 4-channel on FM up to 24 hours a day—without spending an extra dime on still more equipment.

Again, ordinary "RM" decoders cannot do the job. Only the QS vario-matrix decoder can do that. Think of it. Four independent channels of sound from present-day FM via QS—for free.

The Type-A QS vario-matrix, constructed of four precision IC "chips" for extra dependability, is a Sansui exclusive. With its superior decoding capabilities and its QS Synthesizer, it guarantees that the QRX all-source 4-channel receiver makes all the others practically obsolete.

FM STATIONS IN AMERICA HEARD IN QS 4-CHANNEL
