

Involve Sweet Spot™ Technology (SST™)

For Original Equipment Manufacturers under Licence

Involve Audio have developed a **patented technology** that gives all listeners in a room a full stereo or surround experience **no matter where they are sitting**.

Sweet Spot™ Technology keeps sound consistent by **widening the sweet spot to the entire room**. For TV, Automotive Audio, Concerts and Shows this means that people sitting to the side of a room still **receive complete stereo sound** and for Cinemas, Home Theatres and Events this means people sitting on the side, or at the front or back still **receive full surround sound**. The problem of **image shift** is **eliminated** by using a combination of hardware and software techniques developed by Involve Audio and can be scaled to any room size and market.

Residential Applications

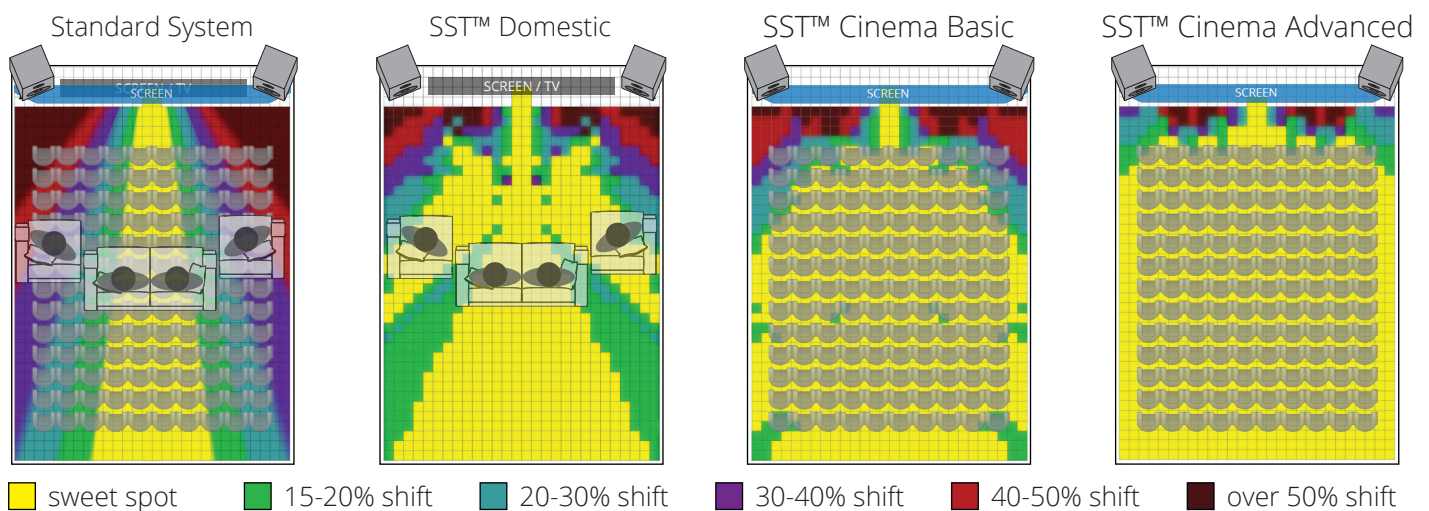

- Home Theatre
- TV, Movies, games
- Wireless Room Speakers
- Automotive OEM, After-market

Commercial Applications

- Cinema, Theatre
- Studio
- Concerts, Shows
- Exhibitions, Installations
- DJ, Parties, Events

SST™ Stereo Comparison

Involve Audio have patented and patent pending technologies that are the culmination of over five years of research, development and above all creative, innovative thinking. The technologies are designed for use in all areas of the audio and audio/visual industries and are available now to all Original Equipment Manufacturers under licence.

Involve Audio uses a simple licensing model, please contact us for more information or to arrange a demo of our technologies.
